DIOXIN?

WHAT IS DIOXIN ?

- A CARCINOGEN (CANCER HAZARD)
- In 1997 - the international Agency for Research on Cancer published that:

→ DIOXIN IS NOW CONSIDERED A GROUP 1 CARCINOGEN
(A Known HUMAN CARCINOGEN)

- In 2001 - The U.S.National Toxicology Program upgraded Dioxin to a known to be human Carcinogen.

- Many other health problems linked to dioxin exposure!

HOW DANGEROUS IS DIOXIN ?

- **130 TIMES MORE TOXIN THAN CYANIDE**

Cyanides destroy human cells, and among others lead to heart, respiratory system and central nervous system failure.

Arsenic poisoning can lead to a variety of problems, from skin cancer to keratosis of the feet.
